

BALDOR[®] GENERATORS

Towable Genset Plus Light Tower: A New Generator Solution

Baldor has a new portable lighting solution for various applications, including construction, drilling, farming and agriculture, landscaping, road repair and more. Baldor Towable generators, which have been around special events and construction for several years, can now be equipped with a 30 foot telescoping light tower kit.

The towable light tower kit is easy to use and extremely portable. Available on the Baldor TS35T towable generator, assembly of the light kit takes about two hours to mount. You simply remove the unit from the shipping pallet, install the special designed brackets and ballast box (no drilling required) and attach the self contained telescoping light mast. The final step is to plug the provided cord into a 120-volt/50 amp twistlock outlet provided on the generator control panel.

Like traditional light towers, the quality of the light is easy on the eyes and excellent for nighttime work. With the tower kit attached, the mast can rise to a maximum height of 30 feet and offers 360 degree rotation. Four 1,000 watt metal halide lamps are enclosed in durable cast aluminum elliptical fixtures. And, because the TS35 is rated at 30kW, there is well over 25kW of extra power available when all four lights are burning.

The Baldor TS35T generator is constructed with superior sound attenuation and is very quiet. When combined with a light tower kit, the combination offers a huge benefit to the rental and construction markets. A great match for special events as the generator offers 1 and 3 phase voltage selection with a run time of 36 hours at half load. Another benefit is its portability. The light tower kit can be installed in the field or ordered as a completely installed unit from the factory.

Easy to use, portable and attached to a generator so quiet you can stand beside it and carry on a normal conversation, the Baldor TS35T light tower combination is an excellent solution for a variety of special event and construction applications.

TSLM35T

What is included in the kit?

Ballast Box
Self contained light bar with elliptical fixtures
4—1,000 watt metal halide lamps
Telescoping mast with manual winch
Mast supports and yoke
Left and right outrigger
Outrigger jacks
Wiring harness
Hardware kit

Tower Kit Standard Features

5-7 acres light coverage
30' mast height
Zinc plated mast material
360 degree tower rotation
Coiled mast cord
Forklift pockets
65 mph maximum wind load rating
TS35 length is 13.3' with mast stowed
TS35 width is 11.3' with outriggers out

About Baldor ModExpress™

ModExpress is a unique Baldor customer service. It started with the motor products several years ago and has been adapted to other product lines. Baldor offers Mod choices to two generator products: stationary NG/LP standby units and to the Towable gensets, such as the featured TS35T. Mod's purpose is to offer customers who purchase a base unit several accessory choices that can be factory installed in 2-3 days or in some cases field installed. This adds value for the customer in several ways including quick delivery and cost savings. Huge benefit to the customer as they are not talked into buying features that will never be used.

Baldor's ModExpress really is ...

"A New Concept in Generator Power."

TS35 Towable Generator
